

# **FlightScope Golf Simulators - Fantastic Features and Accuracy With a Price Point Most Golfers Can Afford**

It's not that long ago that golf launch monitors and course simulators were the preserve of the tours and the most sophisticated fitters and retail outlets.

But things are changing drastically and with monitors now available from companies such as FlightScope, more golfers can access cutting-edge technology that works as both a launch monitor and simulator to help them understand their games better and offer entertainment in equal measure.

If you are in the market for a golf launch monitor that can double up as a simulator you can't go wrong with the FlightScope golf simulator.

You should consider the FlightScope golf simulator for many reasons, but let's start with the price.

Whilst you can spend thousands of dollars on other simulators the FlightScope golf simulator is available at Gamer Gear Direct starting at \$1999.

Additional reasons why golfers should consider the FlightScope golf simulator is its ease of set-up, usability and portability which we'll cover in more detail later.

At Gamer Gear Direct we are a fully authorised dealer for FlightScope products. We also offer a wide variety of bundle packages featuring the FlightScope golf simulator to fit every type of budget.

Our staff are more than happy to talk you through all the bundles we have available and help you find the right one for you.

We'll now take you through the reasons why we think the FlightScope simulators are some of the best you can buy.

To give you the overall perspective on FlightScope we will look at:

- **The technology of a FlightScope golf simulator**
- **FlightScope device options and what they offer**
- **Setting up the FlightScope golf simulator**
- **Supporting software options**
- **Bundle options for FlightScope available at Gamer Gear Direct**

## **The technology of a FlightScope golf simulator**

The FlightScope golf simulator is a radar-based simulator.

This means it detects and measures the movement of the golf ball after impact and provides data parameters that will cover the entirety of the golf shot.

This doesn't mean that this type of launch monitor is best used outdoors as the data is provided within a split second of the ball being struck.

FlightScope has introduced what it terms "Fusion Technology" which marries up the existing 3D Doppler radar technology with synchronised image processing to enhance the devices' already impressive accuracy.

In effect, FlightScope is drawing on the strengths of both technologies whilst eliminating their respective weaknesses.

Fusion technology is available in FlightScope's Mevo+ which we'll look at in more detail below.

## **FlightScope device options and what they offer**

FlightScope offers two options for golfers to choose from.

- **FlightScope Mevo**
- **FlightScope Mevo+**

### **FlightScope Mevo+**

We will concentrate on the Mevo+ for the purposes of this article as we have paired the Mevo+ with some great bundles which we'll share with you later.

What does the Mevo+ offer?

For starters, the Mevo+ can be used for both outdoor and indoor practice.

For both indoor and outdoor use, the Mevo+ is set up at the same distance behind the hitting area so you don't need to try and remember two measurements for optimal positioning.

It also doesn't matter if you are left or right-handed as the Mevo+ is set up in the same position for either golfer.

The Mevo+ packs a powerful punch in terms of the data parameters it can produce - 16 in total.

The data parameters recorded are:

- Carry distance
- Spin rate
- Club speed
- Ball speed
- Smash factor
- Apex height
- Flight time
- Vertical launch
- Horizontal launch angle
- Lateral landing
- Angle of attack
- Total distance
- Roll distance
- Spin axis
- Spin loft
- Shot shape

This is a lot of insight that is great if you are looking at an exercise like accurately obtaining average distances for each club in your bag.

Additionally, there are enough parameters available that you can focus on specifically if it relates to something you have been working on specifically in your swing.

The Mevo+ dimensions are 8.2x8x2.4 inches.

This means the FlightScope Mevo+ can easily be transported to wherever you play and practice. It also makes an easy travel companion if you're venturing to play golf further afield.

An additional advantage is that the Mevo+ will easily fit into most people's golf bags without adding much in the way of additional weight - the Mevo+ tips the scales at 1.76 ounces.

In terms of pricing the Mevo+ comes in at \$1999.00.

This is a reasonable amount of money in anybody's book but the level of accuracy in the data it produces and the software functionality available for this golf simulator is very impressive.

On Mevo+ you can also have your swing recorded and use the option of placing reference lines over the imagery.

This is a useful feature if you have been working on your swing with a coach and want to send them a progress update via what's been captured on the Mevo+.

If you are a real "range-rat" the Mevo+ battery will support those extended sessions on the practice ground with a new improved 3-hour battery life.

We'll cover the software in more detail for the FlightScope Mevo+ shortly but another advantage of purchasing the Mevo+ is the upgrade options offering further ways to enhance your experience.

### **Setting up the FlightScope golf simulator**

The FlightScope Mevo+ is designed to be used with minimal fuss once purchased.

In both instances charge the battery of the device first which should take roughly two hours.

While the battery is charging, you can download the app - FS Golf for the Mevo+ which is available to download on IOS and Android.

The equivalent software is available to download if you want to use your Mevo+ device with a PC/ laptop.

Once the Mevo+ device is fully charged it can be linked up to the app using Bluetooth or WiFi.

When the device has connected you can start to use it.

For positioning behind the ball, FlightScope recommend a maximum distance of nine feet for the Mevo+.

This is an important figure to bear in mind if you are using indoors and are calculating how much room you may need.

For indoor use, it's advised that fluorescent lighting and electronic devices placed in front of either Mevo+ device can affect the radar's tracking performance.

### **Supporting software options**

The basic app that is available for the Mevo+ presents quality graphics and how the data presented for each shot are easy to follow.

But is there more available?

The answer is an undoubted yes.

With the Mevo+ you can add the Pro Package which provides additional data parameters taking the total to 28.

You can challenge yourself via the skills challenge (an additional app is available for the skills challenge).

You can follow the skills challenges laid out or you can customise and make your own skills challenge. This can be a useful feature to assist with any improvements you are making in your full swing or want to sharpen up your short-game skills.

FlightScope prices the Pro Package at \$1000 which does seem expensive however there are no ongoing subscription plans so once you buy the package you get everything you need.

New for 2023 is the Face Impact software which will be available from late February in the FS Golf app.

Face impact data is presented as a heat map of the club face giving detailed feedback on where exactly you are striking the golf ball regardless of which club you are using.

FlightScope offers the Face Impact software for \$499.

### **The Golf Club 2019**

The Golf Club 2019 can be used in conjunction with the FlightScope Mevo+ and features over 170,000 golf courses from around the world presented in ultra HD 4K definition.

Have a look at some of our bundle options listed below that integrate the FlightScope Mevo+ with The Golf Club 2019.

### **E6 Connect**

Adding an additional 6 ultra HD 4K golf courses and an additional 17 driving ranges, E6 Connect offers another fantastic simulator experience to your FlightScope Mevo+

We also offer E6 Connect in our bundle options to add even more variety to your simulator experience.

### **Bundle options for FlightScope available at Gamer Gear Direct**

Now that you have a better idea of what the FlightScope Mevo+ simulator offers, we've picked out some great home simulator bundles that will cater to various budgets.

If you are looking to set up your own simulator at home it's worthwhile thinking about:

- Dimensions of space available to house the simulator
- Will the simulator be placed in a temporary or permanent location
- Are you looking to house the simulator indoors or outdoors

Our in-house experts at Gamer Gear Direct will be more than happy to assist in providing any additional information you need or answer any questions you have giving you full confidence in your purchase.

For all bundles listed, we offer a full 12-month warranty plus lifetime technical support.

### **FlightScope Mevo+ golf simulator practice bundle From \$6069**

A very popular option if you are looking to set up a basic, high-quality home simulator bundle.

We offer the Mevo+ simulator with E6 software (IOS only) offering five simulated golf courses to play and seventeen driving ranges to sharpen your ball striking.

Along with the Mevo+ you get the following:

### **Home Series V2 or Pro Series V2 nets**

Both nets are manufactured using commercial-grade polyester designed to safely stop a golf ball travelling up to 300 KM/H.

These nets are flexible and durable enough to be used both indoors and outdoors and can be constructed in less than 5 minutes without any tools required.

We also have a variety of sizes to fit most spaces that you may consider suitable for locating your simulator.

### **Choice of mats**

We have two premium quality options available for your choice of mat:

- HUGE net return Pro Turf measuring 3m x 1.8m
- Premium Tee Up turf measuring 1.5m x 1.5m

The bundle also comes complete a large duffle bag for easy storage when not in use.

### **FlightScope Mevo + HomeCourse restartable golf simulator bundle From \$10,799**

This is the ideal bundle if you are looking to add a high-class projector plus an impact screen that can be fully packed away with minimal fuss.

It is also ideally sized for virtually any room in the house needing a total space of 2.5m (H) x 3.5m (W) x 5m (L).

With the Mevo+ we also provide access to The Golf Club 2019 which allows you to play 170,000 golf courses from around the globe and all presented in ultra HD 4K graphics.

Please note The Golf Club 2019 is a PC-compatible-only option.

This bundle also features:

### **HomeCourse Golf ProScreen 180**

The world's first retractable golf screen.

Controlled by a remote, the screen can be raised or lowered in 30 seconds.

The screen's retractable attributes do not affect its ability to stop real golf balls from being hit into it as it is constructed from ballistic-grade material.

### **Optoma GT1080HDR short throw projector**

There are few better projectors available in the market that will produce the most striking HD graphics to make all 170,000 courses available on The Golf Club pop out in spectacular detail.

The Optoma projector comes with a standard ceiling mount but we also provide a secure floor enclosure option if you prefer.

The bundle is completed with the high-grade Pro Turf Mat complete with two rubber tees

### **SimSwing 10 Mevo+ golf simulator bundle**

## **From \$11,199**

This simulator bundle is one of the best you can get but it also has a small footprint with the recommended space required to house the simulator being 2.5m (H) x 3.5m (W) x 5m (L).

Along with the Mevo+ we also gave you lifetime access to The Golf Club 2019 and its 170,000 golf courses presented in ultra HD 4K.

You will also have access to E6 simulator software with an additional six golf courses and seventeen driving range options.

Included in the SimSwing bundle is:

### **Carl's Place 'preferred' impact screen**

Designed and built to be the ultimate impact screen.

Produced from tight-woven, heavy-duty polyester material this screen can withstand thousands of impacts from real golf balls travelling up to 300 KM/H.

This rugged durability does not affect the screen's ability to house crease-free high-definition graphics enhancing the sensation of playing some of the most famous golf courses in the world.

### **Carl's Place simulator enclosure**

To complement the 'preferred' impact screen is the simulator enclosure also from Carl's Place.

This enclosure is made from high-grade, heavy-duty quality polyester that features an innovative velcro system for assembly.

The additional benefit of the velcro system is the lack of tools required to construct the enclosure and the time it takes to assemble.

The side barrier nets will also ensure that any very badly struck shot will not cause damage to anything else in the room.

### **Optoma GT10180HDR short throw projector**

This is the best projector for bringing to life all 170,000 courses available in The Golf Club 2019 to life in perfect ultra HD 4K graphics.

Take your pick from the ceiling mount or floor enclosure for the best results.

### **Net Return Pro Turf hitting mat**

As befitting of this bundle, the Net Return Pro Turf hitting mat is made from premium materials and measures 3m x 1.8m.

When not in use, this mat can easily be folded up for convenient storage and comes with two range mat rubber tees for use with longer clubs.

If you are looking for something different, there are two alternative mats available for selection.

## **SimSwing 12 Mevo+ Golf simulator bundle**

## **From \$11,699**

If space and to a degree price are not an issue then this bundle is the one for you.

The SimSwing 12 has a bigger footprint than the SimSwing 10 and we would recommend a floor-space of 2.9m (H) x 4.5m (W) x 5m (L) for optimal use.

The bundle offered is similar to that of the SimSwing 10 but as a reminder, you get the following:

- Mevo+ with a protective case
- Lifetime access to The Golf Club 2019 with 170,000 courses available in ultra HD 4K
- E6 Connect software with additional 6 golf courses and 17 driving ranges (IOS-only compatibility)
- Carl's Place 'preferred' impact screen - able to stop golf balls travelling up to 300 KM/H with perfect high-definition images optimised for full-screen coverage)
- Carl's Place simulator enclosure - high-density and easy to assemble via velcro system
- Optoma GT1080HDR short throw projector, perfect for projecting ultra HD images of your favourite golf courses with a choice of ceiling mount for floor enclosure
- Net Return Pro Turf hitting mat or two alternatives

In conclusion, it's easy to see how the FlightScope golf simulators bridge both the launch monitor and golf simulator worlds.

Its wealth and accuracy of data provided will provide you with enough insight into how you hit the ball.

It can entertain and challenge you with the skills challenge and courses available to play.

Linking up with E6 Connect and The Golf Club 2019 can allow you to play some amazing golf courses from around the world.

In purchasing the FlightScope Mevo+ you have a highly portable device that can fit easily into your golf bag or travel bags without adding much additional weight.

Finally, the price point.

The FlightScope Mevo+ golf simulator offers fantastic value for money compared to some of the more expensive simulators on the market.

The accessible price point for the FlightScope Mevo+ simulator makes it a highly viable option for a wide demographic of golfers.

Visit Gamer Gear Direct and we'll be more than happy to show you the FlightScope golf simulator options we have available to enhance your golf game.
